Congratulations on the purchase of custom tuned STI dampers from Feal Suspension. We hope you enjoy the benefits of suspension revalved specifically for your vehicle and driving needs.

IMPORTANT: PLEASE READ BEFORE INSTALLING

Please note that we have modified the top of the strut in a way that may require a different installation process. Prior to the revalving service, a socket for an Allen tool was located at the top of the strut. The revalving service replaces this socket with a plug that **must not be removed. DO NOT TURN, REMOVE, OR HAMMER ON THE PLUG.**

Feal Suspension suggests one of the following to tighten the top hat nut:

- A. Use an impact to tighten the top hat nut; or
- B. Reach under the dust boot and hold the insert from spinning while tightening the top hat nut.
